Summary

Engineering leader with 25+ years of experience building and modernizing distributed systems, leading cross-functional teams, and improving software delivery across growth-stage and enterprise environments.

Experienced leading distributed engineering organizations across the US, LatAm, and India with a focus on modernization, delivery predictability, operational reliability, and reducing the friction that slows teams down as they scale.

Hands-on background across React/TypeScript applications, AWS cloud platforms, distributed systems, CI/CD, observability, security, and AI-assisted engineering workflows. Pragmatic, systems-minded, and focused on applying AI where it creates value without adding unnecessary complexity or risk.

Technologies: AWS | Node.js | React | TypeScript | MongoDB | SQL | REST APIs | CI/CD | GitHub | Agile | DevOps | AI/Copilot/LLM | Distributed Systems

Core Strengths

- **Engineering Leadership:** Leading distributed engineering organizations, mentoring managers and senior engineers, and building accountable, high-trust engineering teams
- **Distributed Systems & Cloud Architecture:** Designing and modernizing scalable cloud-native platforms with a focus on reliability, maintainability, and operational health
- **AI-Assisted Engineering Workflows:** Implementing practical AI-enabled workflows and development tooling to improve engineering productivity, onboarding, and delivery execution
- **Delivery & Operational Execution:** Improving delivery predictability, reducing operational friction, and helping teams ship high-quality software consistently
- **Technical Depth:** Hands-on experience with React, TypeScript, Node.js, AWS infrastructure, CI/CD, observability, and distributed platform architecture

Professional Experience

Ignite Sales, Inc. – Director of Engineering (2020–Present)

- Led 5 distributed cross-functional teams across the US, LatAm, and India spanning engineering, QA, and technical leadership functions
- Reorganized fragmented engineering functions to improve ownership clarity, delivery predictability, and engineering effectiveness across shared systems
- Reduced AWS infrastructure costs by 33% through platform optimization and architecture improvements
- Improved security posture from 7.2 to 9.8/10 through targeted technical controls, operational improvements, and engineering process alignment
- Led modernization initiatives across distributed services, including large-scale MongoDB upgrade efforts
- Improved deployment reliability and reduced operational overhead through CI/CD automation and release process improvements
- Implemented AI-assisted engineering workflows to improve onboarding, productivity, knowledge sharing, and development effectiveness

GeekSuite R&D – Principal Architect (2024–Present)

Independent architecture and applied R&D focused on AI-enabled engineering workflows, secure distributed systems, and modern platform design. Translate emerging tools and patterns into practical improvements for delivery velocity, scalability, and developer productivity.

Sabre – Sr. Software Engineer, Enterprise Platform (2014–2020)

- Delivered modernization initiatives across enterprise travel platforms using React, Node.js, and AWS
- Led key migration efforts for legacy systems with minimal disruption
- Contributed to React Native rewrite of TripCase mobile platform
- Partnered across teams in a large-scale enterprise environment
- Handled systems that supported millions of travellers a day

Fussy Monkey Designs – Founder (2004–2014)

- Built custom software systems for SMB clients
- Developed bookkeeping and legal workflow platforms
- Managed full-stack architecture and integrations
